#### **DETAILED ACTION**

1. Applicant's amendment in Paper No. 21, which directly amends claim1, is acknowledged. This amendment is in response to the 4/16/03 Office Action.

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 2. Claims 1 and 13 are rejected under 35 U.S.C. 102(e) as being anticipated by Aoki et al. (U.S. 2001/0026605 A1), who disclose a method of removing a reactor pressure vessel through a roof of reactor building, with the aid of a crane

Applicant's claim language reads on the Aoki et al. invention as follows: a) "protective measure for a used fuel pool" reads on chamber 83 (see Figs. 7 and 12); and b) "guide with variable arm length" reads on structure 83g which can be opened and closed (see Figs 7 and 12).

Note that chamber 83 is capable of providing a protection for the spent fuel pool 8 because it encloses the reactor pressure vessel 2 while the latter is being removed from the reactor building. Also, structure 83g, which is capable of being opened and closed, acts as a guide for the reactor pressure vessel during its travel into the chamber

Application/Control Number: 09/942,842

Art Unit: 3641

83, i.e., it constrains the movement of the vessel within the aperture formed by its two movable parts. Structure 83g has a variable arm length because its protrusion into the aperture of floor 83 varies depending on whether said structure is in an open or closed configuration. Protective measure 83 also extends toward the nuclear building roof 2. As per the claim language, this roof is above an operating floor 34 that forms an upper face of a sidewall of spent fuel pool 8(see Figs. 2 and 6).

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Aoki.

As to the limitation in the claim regarding providing the protective measure with a cushioning member, this is either: a) a matter of optimization within prior art conditions or through routine experimentation (see MPEP 2144.05II.A); or b) obvious over Aoki because one would always provide a cushioning element to minimize damage due any interaction between a container and a contained component during transport or movement.

Art Unit: 3641

#### Conclusion

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Rick Palabrica whose telephone number is 703-306-5756. The examiner can normally be reached on 7:00-4:30, Mon-Fri; 1st Friday off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Carone can be reached on 703-306-4198. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-1113.
